Introducing App Studio

UNIT4

A new feature for the Unit4 Extension Kit, making customization easier.

1

Welcome

**We've recently announced the general availability of App Studio –
a new feature for the Unit4 Extension Kit that can help you
streamline your development and automation efforts.**

In this webinar we will discuss:

- What is App Studio?
- Who is it App Studio for?
- Use cases
- Demo
- Q&A

Your host today

Rafael Artacho
Product Director, Unit4

UNIT4

3

App Studio is a customization **tool** that **extends ERPx** with **new screens** and **Apps**

UNIT4

4

2

A different approach…
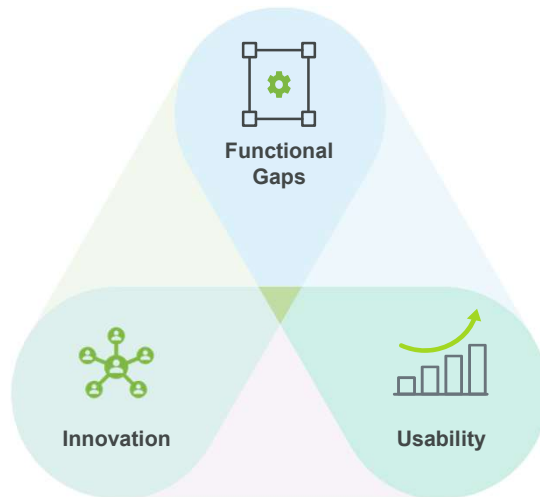

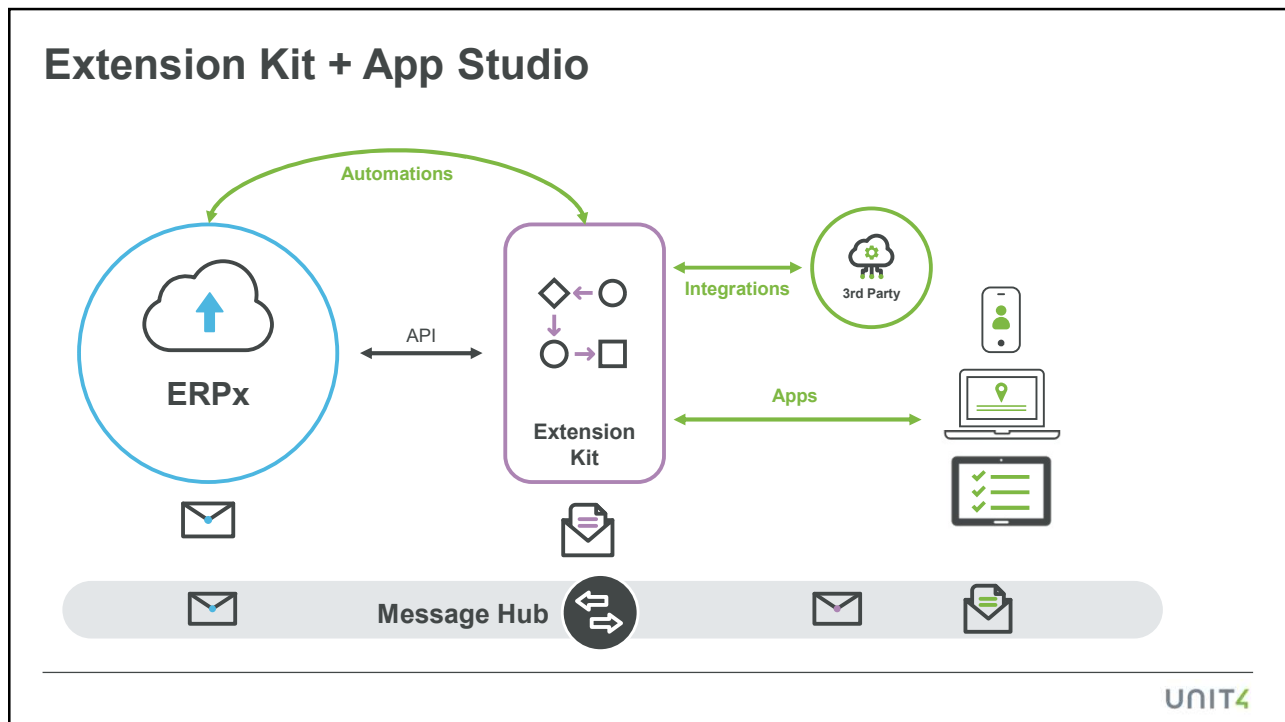

| Old customization methods	Extension Kit
⚠ Modify the code and the data base	★ Adds new services to the ecosystem
⚠ Increase complexity	★ Leverages the capabilities of the Platform
⚠ Higher costs	★ Out of the box solutions
⚠ Difficult and Expensive Updates	★ Fully compatible to new upgrades and releases

UNIT4

5

Customization is still needed…

Functional Gaps

Innovation

Usability

8

Who is App Studio for?

Business users

- Forms

Technical consultants and Admins

- Integration with 3rd Parties
- Data transformation (scripting)
- Complex validations and interactions

UNIT4

9

App Studio
Use Cases

10

Use cases

A reduced version of the Credit invoice screen with prepopulated fields and custom validations

- Reduce the complexity of the task
- Avoid accounting errors

UNIT4

11

Use cases

„Companies' hub" that connect to external sources (D&B, Chamber of commerce, sanction lists,...) to create customers and suppliers

- Saves user time
- Avoid manual errors
- Inform decisions

UNIT4

12

Use cases

New Supplier invoice and Incoming invoice forms that display/ hide fields depending on the customer's region

- Enables localizations
- Reuses solutions

UNIT4

13

Use Cases

- Employee set-up portal in local language (Turkish)
- Customer/Supplier portal to share master file and transaction details
- Upload/download/visualize documents
- Request to hire flow: Users can generate vacancies without having to create them manually
- Employee details enrichment from LinkedIn based on their profile stored
- Registration advance payment: Load order details and create a payment advance lower than the total order value
- Supplier evaluation form
- Multicompany management using a client template to create/maintain the same client in different companies
