

Webinar Questions and Answers

Why is it important to have extensibility built into your ERP – Nov. 22, 2023

Question	Answer
Is Arribatec's portal for creating/maintaining suppliers/customers valid in ERPx?	Arribatec's portal is currently not available on ERPx. They are working at the moment on the portal to become available for ERPx customers as well. Arribatec should be able to share when the portal will become available.
Is Proactis Marketplace currently available for ERPx customers?	ERPx offers a standard capability for punchout to external marketplaces. Additional integration flows for - ordering and e-invoicing can be created. We are currently working for Industry Mesh on Amazon Business Marketplace integration for e-ordering and - invoicing. Integration with ProActis can be created in a similar way using Extension Kit leveraging the existing APIs on ERPx, but this is not planned on our roadmap so far.
What does REST API mean?	An API, or application programming interface, is a set of rules that define how applications or devices can connect to and communicate with each other. A REST API is an API that conforms to the design principles of the REST, or REpresentational State Transfer architectural style. ERP CR offers a combination of SOAP (Simple Object Access Protocol) webservices and REST APIs, ERPx is fully REST API based for integrations.
The demo showed master file details. Can this include creating transactions?	Yes it can, as long there is an API available. Transactions can be imported from different external sources and include for example financial transactions, sales orders, purchase orders, and incoming invoices. Both AppStudio and Extension Kit can be used for transactions as well next to master data.
How do we migrate our integrations now (on-prem 7.10) if we can't access extension kit until we are on the cloud?	Unit4 doesn't offer a trial or sandbox environment for Extension Kit at the moment. On Premise ERP7 customers need to sign a Cloud contract to get access to Extension Kit since it is a multitenant Cloud service.
