The Journey to ERPx – Right for your Business

What path to choose when moving to ERPx from Unit4 ERP on-premises – and how the journey might look for you
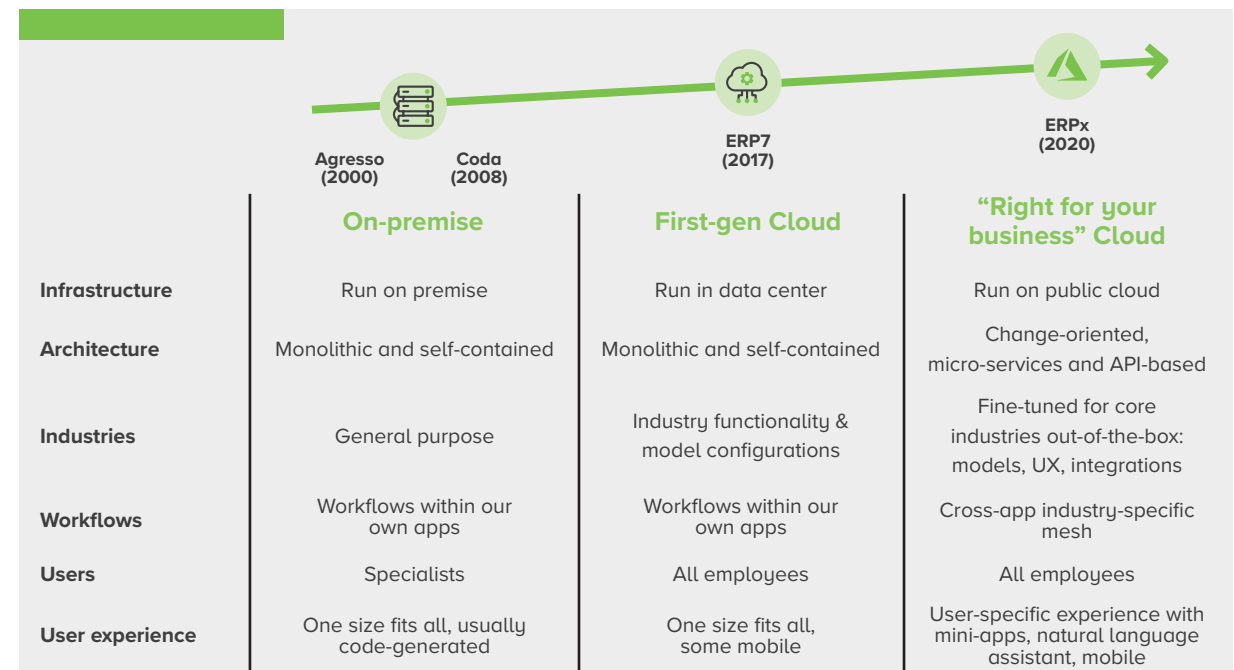

ERPx is an evolution of Unit4 ERP in the cloud. A next-generation ERP solution built and delivered on Unit4's People Platform. ERPx helps **boost the agility and resilience of your organization.** It's fully web-based, cloud-native SaaS solution. As with all versions of Unit4 ERP, ERPx continues to provide flexible ERP capabilities that are purpose built for service-centric organizations — brought to you on our native cloud microservices architecture so you can **adapt, scale, and innovate at a much faster rate.**

By combining the maturity and depth of our people-centric ERP solutions onto an industry-leading cloud platform, we've built finance, PSA and HR solutions that will help you lead your organization into the digital age.

**But what is the right journey to ERPx for your organization?**

Well advanced on a compelling cloud journey

ERPx marks the **next version of our flagship ERP product** as we evolve through our **cloud journey.**

Agresso (2000)　Coda (2008)　　ERP7 (2017)　　ERPx (2020)

	On-premise	First-gen Cloud	"Right for your business" Cloud
Infrastructure	Run on premise	Run in data center	Run on public cloud
Architecture	Monolithic and self-contained	Monolithic and self-contained	Change-oriented, micro-services and API-based
Industries	General purpose	Industry functionality & model configurations	Fine-tuned for core industries out-of-the-box: models, UX, integrations
Workflows	Workflows within our own apps	Workflows within our own apps	Cross-app industry-specific mesh
Users	Specialists	All employees	All employees
User experience	One size fits all, usually code-generated	One size fits all, some mobile	User-specific experience with mini-apps, natural language assistant, mobile

Ways into ERPx

There are three different paths to ERPx depending on where you are coming from, and how fast you want to complete your journey; Migration, Journey, or Re-implementation. The **Cloud Migration Assessment** will help define the best approach and should be one of the first steps of your ERPx Journey. You can already today check your ERP's cloud readiness with our simple assessment tool. It's free online via **Community4U**, it only takes a few minutes, and you receive a full visualized report within 24 hours.

Ways into ERPx

Cloud Migration Assessment

Migration	Journey	Re-implement
Migrate straight into ERPx with T-shirt size approach	ERP Cloud with additional steps to reach ERPx	Industry Model approach

Customizations

| Migration |

Low

ERP5≤   ERP6   ERP7

Version

Ways into ERPx

Migration

Migrate straight into ERPx

The simplest way to benefit from next-gen ERP
For ERP7 customers with a low level of customizations, a direct **Migration** can be a suitable option.

This means:

- Your new solution will retain historical data.
- Existing customizations will need to change ERPx supported functionality.

Journey

One or more smaller steps

Small steps to modernize your ERP
For any customer who is not fully ready for ERPx, typically with a high level of customizations, and/or on an older version of ERP, **The Journey** is probably the best option.

This means you will be able to:

- Make the move to Unit4 ERP7 Cloud before the full ERPx migration.
- Have the opportunity to align current customizations with ERPx supported functionality.

Re-implement

Best practice approach

Modernize your ERP with our out-of-the-box Industry Models
For any customer wanting to start fresh with ERPx, typically for customers:

- with old versions of Unit4 ERP, and / or
- with customized business processes looking for a standard approach and / or
- coming from other Unit4 products (like DREAM/DECADE and other products),

Re-implementation with Industry Model approach is probably the best option

This means you will:

- Start with a clean sheet and build a fresh, with a new out-of-the box solution
- Option to archive historical data.
