

## Lightbulb moments for impact planning

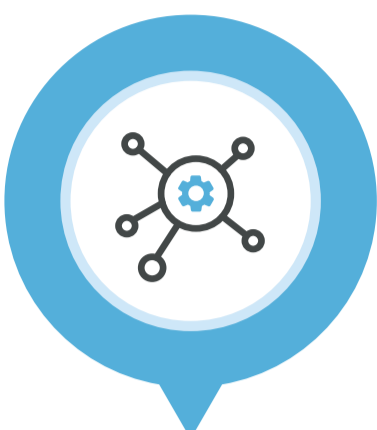

What if you could connect everything? Planning, data, people, budgeting, the whole caboodle.

In fact, what if you could connect everything and use it to illuminate your nonprofit's decision-making. What would that look like?

It would look like Unit4 FP&A, which enables nonprofits to:

Go beyond reporting to interrogate available data meaningfully

Connect the dots between external conditions, internal capacity, and program outcomes

Harness the power of what-if scenario planning and modeling

To make plans and data-driven decisions that boost financial resilience, engage your workforce and enable real collaboration to deliver more impact where it's most needed, you need a connected solution.

## Why connect up?

### Caught out

of nonprofits were utterly unprepared in any way (technologically or culturally) for an emergency that would require staff to work from home.

### A home from home

of nonprofits that were prepared (technologically and culturally) said they shifted entirely to working from home in one week or less.

### Beat the big challenges

of nonprofits need more connected solutions to eliminate "Labor-intensive systems and disjointed manual processes" as their top priority.

#### Did you know...

Your most effective planning capabilities are what-if scenarios (leaders are 2x more likely to say), integrated financial planning and budgeting process.

### Lack of insight

of nonprofits can't automatically notify decision-makers if scheduled activities don't happen on time or when certain conditions occur due to disconnected systems.

#### Did you know...

This lack of visibility into the changing landscape makes it harder to spot decreases in demand and disruptions in workflows, leaving you unprepared and vulnerable to financial uncertainty.

## What are nonprofits doing to turn on the lights?

### Stay focused

of nonprofits are maintaining or increasing their technology spending.

#### Did you know...

Modernizing your business systems and updating technology infrastructure are two of the top three goals for nonprofit leaders.

### Don't get caught out, again

of nonprofits had to make unplanned investments in technology systems and tools just to continue operations in 2020.

#### Did you know...

Top nonprofits are 2x more likely than others to prioritize monitoring and minimizing administrative/back-office costs using integrated systems.

## What happens when you can see it all

By connecting the data that's important to you and your stakeholders, you can make plans and decisions that improve financial resilience, engage your workforce, and enable more impactful collaboration and program delivery. Unit4 FP&A gives you the power to:

**Integrate data**  
Collate disparate data sources for clear visibility

**Increase speed and agility**  
With continuous accounting and culture change

**Optimize efficiency**  
With real-time reports, automated workflows, and flexible budgeting

**Plan for anything**  
Cover any possibility with powerful scenario planning capabilities

“With Unit4, we experience a 90% reduction in the time to produce reports as well as provide significantly more value to management, and ultimately, our clients. We can now quickly access critical information and immediate insights that our projects depend on.”

Kim Sammut,  
General Manager,  
Operational Excellence
