1. Introduction

All Unit4 Solutions and Services are built on a common platform: The People Platform. The People Platform has a micro Service based architecture where different Task Focused Applications run independent of each other. These Services are Multi-Tenant, shared Services that integrate with different Microsoft Azure PaaS Services.

Currently there are 4 People Platform Services that can be consumed:

1. Identity Services
2. Digital Assistant Wanda
3. Extension Kit

The Service Description describes the Service characteristic of these Services.

2. Data centers & data residency

Unit4 People Platform Services is built upon the Microsoft Azure infrastructure and platform Services. These Services are delivered from within different geo-political zones, using a primary and a secondary location in every zone to meet Service level commitments and disaster recovery needs. The location within each geopolitical zone is at the discretion of Unit4 and can change from time to time. The table below contains details of the geo-political zones, along with the data center locations. For more information, see Azure region details: azure.microsoft.com/regions

<table>
<thead>
<tr>
<th>Geopolitical zone</th>
<th>Provider</th>
<th>Data Location (Countries/City’s/Regions)</th>
<th>Time Zone</th>
</tr>
</thead>
<tbody>
<tr>
<td>EU</td>
<td>Microsoft Azure</td>
<td>Dublin, Ireland and Amsterdam (DR), Netherlands</td>
<td>CET/CEST</td>
</tr>
<tr>
<td>USA</td>
<td>Microsoft Azure</td>
<td>Texas and Illinois (DR)</td>
<td>CST/CDT</td>
</tr>
<tr>
<td>Canada</td>

<tr>
<td>UK</td>
<td>UK</td>
</tr>
<tr>
<td>US</td>
<td>US</td>
</tr>
</tbody>
</table>

### 3. Service model

All People Platform Services are delivered as Software as a Service (SaaS) and will be consumed as different Services that are full Multi-Tenant. For Unit4 SaaS Customers, the People Platform Services inherits the same SLA as is applicable to the Customer’s existing business solution (e.g. Unit4 ERP, Unit4 FP&A, Unit4 Financials, etc.).

For non-Unit4 SaaS, the Unit4 SaaS SLA is applicable to People Platform Services.
4. **Instances and environments**

There are two shared Instances of People Platform Services in each geopolitical zone, Production Instance and Preview Instance.

The Production Instance of U4IDS is configured as the federated authentication gateway for a Customer’s Production Environment and the Preview instance of U4IDS is configured as the federated authentication gateway for all the Customer’s Non-production Environments.

Wanda the Digital Assistant and Extension Kit cannot be connected to two Environments at the same time, a Customer needs to raise a Service Request with Unit4 every time a new environment is to be connected to one of these Services whereas a Customer’s Production Environment will be connected to People Platform Production Instance and each Customers Non-production Environment will be connected to the single People Platform Preview Instance on request.

5. **Reporting and monitoring**

5.1 **Reporting on Service Performance**

Unit4 provides operational information regarding the Unit4 SaaS Services on the Unit4 Customer Portal. That information includes:
• Service availability
• Monthly Average Response Time: defined as the elapsed time between sending an HTTP request and receiving a response from the Service without exchanging data. This indicator is calculated by Service.
• Scheduled maintenance (times, dates per region).
• Release information and deployment schedules.
• Incidents overview.
• Site recovery status (in the event of the disaster plan initiation)

5.2 Monitoring program

A continuous 24x7 monitoring and resolution program is in place to detect and resolve incidents to meet two leading metrics: Service availability and response time.

Utilization of latest Microsoft technology like Azure Monitor, Application Insights together with internal Unit4 alerting system provide ability to monitor and response to outages or degradation of the Service in a timely manner.

During day to day operations single pane of glass dashboards, alerting mechanism and staff rotation practices enable Unit4 to stay on top of all Service events that need intervention.

6. Releases and Updates

Please note there is no concept of a Release to Unit4 People Platform Services. All changes to a Unit4 People Platform Service are considered an Update of the Service and will be applied automatically and continuously.

Unit4 People Platform Service Updates are deployed in a transparent manner and result in no downtime. As such, Unit4 People Platform Service Updates can be deployed outside of Planned Maintenance windows. In rare cases when downtime is necessary, the Update will be performed during a Planned Maintenance window. Details regarding changes contained in a Unit4 People Platform Service update can be found in the People Platform documentation portal as soon as the Update has been deployed.

7. Planned and unplanned maintenance

7.1 Planned Maintenance

Planned Maintenance windows are dedicated to apply all the respective changes to the Service provided e.g. solution Updates and infrastructure changes. During Planned Maintenance Production Service may be periodically unavailable. You can find more details on schedule presented in the table below:
Planned Maintenance windows (PMW)

Updates and Infrastructure

<table>
<thead>
<tr>
<th>All regions (except Azure US and Azure Canada)</th>
<th>12 per year,</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular PMW: From: Sat 5PM To: Sat 11PM UTC*</td>
<td>or Extended PMW: From: Sat 5PM To: Sun 5AM UTC*</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Azure US and Azure Canada regions</th>
<th>12 per year,</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular PMW: From: Sun 5AM To: Sun 11AM UTC*</td>
<td>or Extended PMW: From: Sat 11PM To: Sun 11AM UTC*</td>
</tr>
</tbody>
</table>

*Time of Planned Maintenance window is a subject of a change (+/- 1h), which is related to winter and summer time adjustments.

Planned Maintenance windows are subject to change upon reasonable notice. The exact dates of Planned Maintenance windows are communicated in Unit4 Community4U. By default all Planned Maintenance windows are regular and take up to 6h, unless they are promoted to extended Planned Maintenance windows, these take up to 12h.

If actual downtime for scheduled or Planned Maintenance exceeds the time allotted for Planned Maintenance, it is considered part of the calculation for Service Outage. If actual downtime for scheduled or Planned Maintenance is less than time allotted for Planned Maintenance, that time is not applied as a credit to offset any Service Outage time for the month.

Planned Maintenance can also be carried out by Unit4 provided that the Customer has received at least 8 hours’ notice. This will occur in unforeseen or exceptional circumstances only (similar to emergency / Unplanned Preventative Maintenance) to deal with a vital or critical issue and Unit4 will use its reasonable endeavours to do this outside Business Hours to cause minimal disruption to the Customer. In this case, because Unit4 provides Customer 8 hours’ notice, this maintenance does not count as Service Outage. This is so that Unit4 is not encouraged to wait until the next Planned Maintenance window to deal with an urgent issue and avoid a Service Credit.

7.2 Unplanned Preventative Maintenance

Unit4 may carry out Unplanned Preventative Maintenance if there is an urgent requirement to secure the stability or the security of the Unit4 SaaS. This action may be taken at the discretion of Unit4 for unforeseen and exceptional circumstances, which require immediate resolution that cannot wait until the next Planned Maintenance window. Unplanned Preventative Maintenance is counted as a Service Outage.
8. Customer responsibilities

Account Set-up

Customer is responsible for designating its Users, and for ensuring that all Users are adequately trained and understand Customer’s remote access and use obligations and requirement to comply with Unit4’s acceptable use policy (www.unit4.com/terms). Where applicable each individual User must establish an Account. Customer is responsible for managing its Accounts and disabling a User’s Account when Unit4 SaaS Service access is no longer required, including immediately upon termination of such User’s affiliation with Customer. Customer is responsible for its Users’ acts and omissions and for all activities occurring under its Users’ Accounts.

Account Administrator

Customer will designate one or more Account Administrator(s). The Account Administrator(s) responsibilities include, but are not limited to, coordinating with Unit4 regarding the Unit4 SaaS Service and managing Customer’s Accounts. Customer warrants that its Account Administrator(s) will maintain authority to act on Customer’s behalf concerning the Unit4 SaaS Service, and that Unit4 can rely on the Account Administrator(s) actions and instructions in connection therewith.

Account Security

Each User is responsible for keeping his or her Account credentials confidential. Users may not share Account credentials, and Customer may not recycle Account credentials when activating or disabling Accounts. Customer will notify Unit4 immediately upon discovering any known or suspected unauthorized access to, misuse of, or breach of security for the Unit4 SaaS Service or its Users’ Accounts and will provide all information and take all steps requested by Unit4.

9. Data Security

Data Security

Data in transit

Customer Data in transit is over public networks is protected with TLS 1.2.

Customer Data at rest

Data at rest is protected using transparent, whole database encryption (e.g. transparent data encryption, and/or whole disk data encryption). Please see the Unit4 Information Security Policy, which is available at www.unit4.com/terms.

Allowlisting

The People Platform Services use dynamic IP addresses; therefore, IP Allowlisting is not supported.
Internet endpoint access

People Platform Services are Software as a Service and therefore require Customers making their endpoints available from outside when running on premises versions of Unit4 ERP or Unit4 Financials.
SCHEDULE 1: Unit4 Identity Services

1.1 General description

Unit4 Identity Services ("U4IDS") is a Multi-Tenant identity solution and architecture for the Unit4 ecosystem that allows Users to have one single identity across multiple applications and provides a single sign-on experience. U4IDS integrates with the organization’s identity solution using industry standard protocols and is shared across Unit4 applications acting as a gateway for external authentication.

In its role as a federated authentication gateway U4IDS does not perform authentication itself, it connects a Tenant’s Users with the Tenant’s trusted Identity Provider (IdP). It is the IdP where authentication is performed. As such, details involved with authentication such as, for example, multi-factor, location and time-based restrictions are implemented by the Tenant’s IdP. Commonly used IdPs are: ADFS/AD, Azure Active Directory, OKTA and PingOne.

U4IDS does not store information about Users nor does it store any User credentials. U4IDS only stores information regarding the Tenant’s IdP that is necessary to enable a secure authentication process.

The following shows a high-level overview of U4IDS and its relationship in a federated authentication architecture.

1.2 Protocol support

U4IDS supports the following federated authentication protocols:

- OpenID Connect
- SAML-P
- WS-Federation

U4IDS supports protocols rather than directly supporting specific identity providers (IdPs). Common IdPs make use of one of more of the standard protocols supported by U4IDS.
Each Tenant can choose one and only one protocol that is used for communications between U4IDS and their one IdP.

### 1.3 Customisation

There are no opportunities to customize U4IDS. U4IDS is configurable in the following areas:

- Claim used to map to a standardized Unit4ID used by Unit4 applications to enable single sign-on across Unit4 applications
- Access token lifetime

### 1.4 Additional Customer responsibilities

Customers are responsible for configuration of their IdP and to provide specific information (required or requested) to Unit4 Cloud Operations that allows for configuration of U4IDS. Assistance with configuration of the Customer’s IdP, or investigating issues with the Customer’s IdP configuration, is available via Unit4 Professional Services as a chargeable activity.

### 1.5 Hybrid Deployment Architecture
SCHEDULE 2: Unit4 Digital Assistant

2.1 General description
Unit4 Wanda ‘the Digital Assistant’ Service ("Wanda") is a true enterprise digital assistant, helping Users take care of their administrative tasks in an intuitive way using a conversational dialog. Wanda can also notify Users of important tasks and activities. Wanda has a skillset based on the Unit4 business solution it is connected to. The specifics skills available in Wanda described in the Service description for the Unit4 business solution that Wanda is connected to.

Wanda works with the following chat applications:
- Microsoft Teams
- Skype
- Slack

As these are 3rd party applications, they each have their own terms & conditions for usage and data privacy which are outside of Unit4’s control. Unit4 is not responsible or involved in the procurement, configuration, usage or support of these 3rd party solutions.

2.2 Data residency
Wanda is available as a cloud-based Service operated by Unit4’s SaaS operations team. Wanda consists of a combination of global and geopolitical zone isolated supporting Services. Given the global nature of Wanda, data is likely to be transferred outside of the Customer’s selected geopolitical zone. I.e. there is no guarantee that data (conversational dialog) with Wanda will be solely stored and processed within the Customer’s selected geopolitical zone.

2.3 Skills of the Digital Assistant
Depending on the Unit4 solution Wanda is connected to one or more skills (effectively bots) provide assistance with various administrative tasks specific to that business solution. Please see the Service description of the respective Unit4 business solution connected to Wanda for details of the skills available.

2.4 Additional Customer responsibilities
Customers are responsible for the configuration of the Unit4 business solution (e.g. Unit4 ERP). The steps required for configuration in the business solution that Wanda connects to are available in the online implementation guide: [https://wanda-implementation-guide.u4pp.com](https://wanda-implementation-guide.u4pp.com). Assistance with this configuration is available from Unit4 Professional Services.

2.5 Preconditions
- Wanda requires Unit4 Identity Services (IDS) to be configured.
- Depending on the type of skills that are used, Wanda may require several web Services in the application to be publicly available in order to communicate with the business solution to perform tasks requested by the User.
• To make use of Wanda the Unit4 business solution it connects to needs to be on a current supported version. Please check the Service description of your Unit4 business solution (e.g. U4ERP) for version dependencies.

2.6 Specific Terms and conditions

When talking to Wanda for the first-time, Customers and their end Users must agree to the overall Wanda Digital Assistant Terms & Conditions. The Wanda ecosystem makes use of several Microsoft Azure Services such as Microsoft Language Understanding Service and Microsoft Bot Connector. The use of these Azure Services is governed by the terms and conditions of the agreement under which Unit4 obtained the Services: https://azure.microsoft.com/en-us/support/legal/. Your interactions with Wanda are also subject to the social media chat application’s applicable terms of use, privacy and data collection policies. How your personal information and other conversational content is transmitted, stored and processed by your social media Service such as Microsoft Teams, Skype or Slack is outside Unit4’s control.

2.7 Data flow and micro Services in use

Unit4 Wanda is integrated with different non-Unit4 Services:

- Microsoft Azure Platform Services
  - Microsoft Bot Framework
  - Microsoft Language Understanding Intelligent Service (LUIS)
  - Microsoft QnA Service
  - Microsoft Teams
- Google
  - GeoCode Service
- Slack

A conversation starts with a User sending a chat message from their chosen 3rd party chat application (Skype, Teams, etc.) to Wanda. The message is sent from the chat application the User is using to the Microsoft Bot Framework. Depending on the chat application Microsoft stores some logistical information about the conversation and forwards the message to Wanda.

All messages and Wanda’s responses are stored anonymously inside the Wanda ecosystem to improve Wanda’s “intelligence” (identify usage patterns, etc.). This data cannot be accessed by any User. Even though stored anonymously chat messages sent to Wanda can include personal data. That’s why when connecting to Wanda the first-time consent of the User is asked. Provided data is solely used for the purpose of delivering Wanda, where Users can always ask Unit4 Wanda to erase their personal data.

To determine the intention of the User, only the actual text of the message (no other information) will be sent to Microsoft’s Language Understanding Intelligent Service (LUIS). LUIS Services store all User utterances anonymously to continuously improve the intent recognition of the Service. According to the intent returned by LUIS, Wanda assistant Service forwards the Users message to the chatbot/skill that can handle that intent.

Users have to log into their Unit4 business account to do anything useful with Wanda. After that every message is internally tagged with the Users Unit4Id and TenantId. If a chatbot requires authentication the User will be asked for the company he works for. The User’s response will be matched against the list of Tenants that are registered in Wanda. The User
is then directed to the regional Unit4 Identity Service its Tenant is associated with, to log into its business account (e.g. U4ERP account). Afterwards Wanda connects that Unit4 business account to the Users currently used chat application. Users can connect multiple chat application accounts to their Unit4 business account.

Wanda offers different chatbots with different skills. Dependent on the chatbot (skill) used, that chatbot might utilize additional Services to better understand what the User is talking about (GeoCode for geographical positioning) or to find answers to the User’s request (QnA Service for the questions and corresponding answers). Google’s GeoCode Service is used to identify locations/destinations in the User’s utterance. Only the part of the User’s message that is suspected to be a location (city names etc.) will be send to Google anonymously. The Microsoft QnA Service is used to answer the User’s questions about Wanda and general help, but also to provide information about the Tenant’s company policies (if this is set up by the company).
SCHEDULE 3: Unit4 Extension Kit

3.1 General description
Unit4 Extension Kit (U4EK) is a cloud based, Multi-Tenant solution operated by Unit4 that provides a toolkit allowing Users to extend the capabilities of Unit4 products. Unit4 Extension Kit gives Customers the opportunity to build or consume Extension Flows.

3.2 Preconditions
- Unit4 Extension Kit requires Unit4 Identity Services (IDS) to be configured.
- Depending on the use case that Unit4 Extension Kit solves, it may require some web Services in the application to be publicly available to communicate with the business solution to perform certain tasks.
- To make use of Unit4 Extension Kit the Unit4 business solution it connects to needs to be on a current supported version. Please check the Service description of your Unit4 business solution (e.g. Unit4 ERP) for version dependencies.

3.3 Restrictions
Unit4 Extension Kit only provides value when connected to any of the Unit4 products. The ability of Unit4 Extension Kit to automate processes and resolve use cases is determined by the events that the Unit4 application publishes and the endpoints made available.

A list of the Enterprise documents (Objects) published as an event by the Unit4 products can be found in the documentation portal.

Please read the product documentation of the respective Unit4 business solution connected to Unit4 Extension Kit for details about the endpoints available.

3.4 Customer responsibilities
Customers are responsible for creating, documenting, testing, maintaining, updating and managing the Extension flow that was created in using Unit4 Extension Kit unless otherwise agreed especially after new Releases / Updates are made available.

3.5 Non Unit4 Services used
Unit4 Extension Kit uses the following non-Unit4 Services:
- Twilio - SendGrid Email Service
- Microsoft Azure Platform Services
  - Storage Account
  - Event Grid
  - Azure Functions
  - Azure App Service
  - API Management
  - Microsoft CosmosDB
  - Key Vault
  - Application Insights
3.6 Specific terms and conditions and Data flow

When a User first log in Extension Kit portal is asked for consent of usage of the Service. When and what data is sent to where is defined by the Flow, which is created by the User. So it is responsibility of the User where the data is being sent and the content of the data, which might contain personal identifiable information.

By default, Unit4 Extension Kit will store historical information about each Flow run. This historical information is accessible by the Users that has access to the portal (this User access to the portal must be granted by another existing User with Owner access rights). In this historical information, some parts are obfuscated so are not visible in the history. These parts are defined by the Actions definitions and cannot be chosen by the User.

The User can switch off this functionality by defining a flow as “Sensitive”, this way no information will be stored and only the result of the flow execution will be shown.

Extension Kit does not store any other User information or usage statistics.
3.7  Limits and regulators on usage

Unit4 Extension Kit supports the creation of Flows. These Flows can be very simple or very complex based on the kind of information that gets processed and the amount and sort of actions used.

Unit4 runs in a Multi-Tenant environment and, as such, Unit4 observes fair use limits so that runaway processes do not monopolize resources.

The Customer can purchase additional blocks of actions executions to increase the limits.

If the Customer exceeds the limit 2 consecutive months, Unit4 can establish a hard stop to protect the fair use policy.

For actual usage limits please see Fair Use Policy at www.unit4.com/terms.
Glossary and Technical Acronyms

Unless defined in the tables below, capitalised words and phrases have the meaning given to them in Unit4’s General Terms of Business or Unit4 Support Terms (found on www.unit4.com/terms).

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Administrator</td>
<td>An appropriate and qualified Business User who will have administrative level control for creation, maintenance and deletion of Accounts providing access to the Unit4 Product.</td>
</tr>
<tr>
<td>Extension</td>
<td>Automated workflow built using Extension Kit.</td>
</tr>
<tr>
<td>Extension Flow</td>
<td>Automated workflow that connects applications and Services together. Each Extension Flow consists of a trigger and one or more actions.</td>
</tr>
<tr>
<td>Extension Kit</td>
<td>Unit4 Extension Kit is a cloud based, Multi-Tenant solution operated by Unit4 that provides a toolkit allowing Users to extend the capabilities of Unit4 products and integrate with other systems.</td>
</tr>
<tr>
<td>Feature Service</td>
<td>Features or solutions delivered as independently deployed and updated Services.</td>
</tr>
<tr>
<td>IDP</td>
<td>An identity provider (IDP) is a Service that stores and manages digital identities.</td>
</tr>
<tr>
<td>IDS System User</td>
<td>Data Base User used for an early access enablement.</td>
</tr>
<tr>
<td>Instance</td>
<td>Physical Service infrastructure and software running on it, deployed in a specific region.</td>
