

# **Unit4 App Studio**

## Extend ERP by easily adding new business screens and applications.

Automation and standardization can save your finance and HR teams a great amount of time, minimize errors and free up resources. Unit4helps organizations maximize the benefits of standard processes with a modern, cloud-based ERP solution that is tailormade with best practices for your industry. And while Unit4 Industry Models give you a fast start in solving many of the business challenges unique to your industry, we understand that every business is different and there is sometimes a need for an even higher level of customization for our customers.

That's why we have developed our Unit4 App Studio and included it in the Extension Kit. Unit4 App Studio gives you the ability to tailor your ERP software with new screens to meet your unique business needs, promoting efficiency, growth and a better user experience.

It is software-as-a-service (SaaS) developed on top of the Microsoft Azure platform and leverages Unit4 Identity Services to secure communications. Extension Kit already supported running business processes behind the scenes, now with Unit4 App Studio you gain visibility and user interaction wherever you needed, through validations and specific business logic flows.

#### **Key benefits**

- Fit for your business -Flexible, tailor-made screens
  - Easily extend Unit4 ERP implementations with custom screens
  - Build apps that run across all devices
- Automation and validation
  - Automate data validation and business processes (e.g. format requirements of data)
  - Include business logic on new screens and forms (e.g. validation of local bank details)
- Easy configuration & maintenance - Low code / no code environment
  - Avoid coding- configuration is made easy through a drag-and-drop interface
  - React to business process changes quickly, without the need of external resources

For more information, go to: unit4.com

### How does it work?

As part of Unit4 Extension Kit, you can configure business screens and forms for your ERP in a userfriendly environment. The App Studio supports "no code" configuration with simple drag-and-drop functionality. This ensures fast and simple creation of custom screens without the need for developers.

Unit4 App Studio includes pre-built templates that help address many of the most common needs of our customers and is based on industry best practices. Save time and effort by using and customizing these templates, or by creating your own templates.

Configuration abilities are based on role security, ensuring that only the right people can create or modify your ERP implementation through App Studio.

### What are the Unit4 App Studio capabilities?

The Unit4 App Studio is delivered as part of the Extension Kit and built on Unit4's integrated ERP Platform. It is a cloud tool that allows you to easily create, update and integrate business screens and applications in your ERP through low code/no code environment. The screens generated with App Studio are deployed on top of the customer ERP infrastructure, utilizing the same security standards and integrating with the user interface providing the same usability and experience as your Unit4 ERP. As it is not part of the ERP core codebase, screens made in App Studio will not interfere with future upgrades, ensuring smooth and continuous business operations.

Unit4 App Studio allows you to add new, custom screens without coding. No need to invest in developer resources or professional services to build tailormade processes and modules for your business as new screens and associated business logic can now be created and maintained by super-users with minimal technical skills.

#### How can I access App Studio?

App Studio is included as part of Unit4 Extension Kit and is available for all customers on the ERPx platform.
