

Be in full and constant control of all your projects

Project Planner provides the ability to create, resource and budget for a project in unity with People Planner and core Business World On! modules.

Through stunning design, fine-tuned functionality and outstanding usability, it significantly improves your organization's ability to plan projects and get them done. Benefiting from the rich functionality of Unit4 Business World On!, it redefines the process of project planning, giving you an instant ability to align projects and people and enabling a swift reaction to changes in demand.

Unified project and people planning

Project Planner and People Planner work seamlessly together, so assignment of people to tasks and projects can be tightly managed in line with the needs of your organization. Now it's easy to monitor projects and ensure your organization delivers on the expectation of your customers.

Rapid, effective and engaging

Bring huge efficiencies to the plan-to-budget process

You can input project data directly in the Unit4 Business World On! Planner module and produce a revenue and cost budget as a direct output, and because people planning is blended with project budgeting, there is total synergy between the two, making the process extremely simple, accurate and efficient.

Create the best possible project plan through “what if” scenarios

Unlimited project plans allow you to create multiple “what if?” scenarios, so you can achieve the best project plan possible in terms of both cost management and the quality of the delivered project. To save time, you can also copy existing plans as the basis for a new plan.

Synchronize project data for a rapid, integrated response to change

Delivery plan dates created in Project Planner can be automatically updated in the Business World On! Project module’s Project Masterfile. Date validation in other Business World On! screens that use the same Work Breakdown Structure, e.g. timesheets and general ledger, can then be driven from Project Planner.

Prevent errors and reduce delays through Project integration

Project Planner works in unity with the Business World On! Project module, which not only eliminates errors by controlling who can and can’t post time, but also enables you to complete your timesheets rapidly, so that project reporting, forecasting, billing and other critical processes aren’t delayed.

Key capabilities

- Alignment of project data and available people resources
- Sharp focus for defining and planning all phases and activities of project
- Unified with budget information in the Business World On! Planner module
- Cost savings through unified budget-related processes
- Savings in outsourcing costs through organization-wide resource visibility
- Improved cost management through “what-if?” capability
- Faster analysis of the project impact on profit and loss
- Unified with People Planner
- Optimized resource management, improving ROI in people
- Consistent clarity
- Collaboration, shared intelligent feeds and in-context discussions
- Clean, uncluttered user interface
- Next-step prompts
- All information on the screen where and when it’s needed
- Rapid and very simple implementation
- Single, clear view of people’s availability and utilization
- Highly searchable skills matching
- Automatic assignment publishing to Outlook for device-independent viewing
