

YOUR CLOUD JOURNEY STARTS HERE

Learn more about the Unit4 Cloud Migration Assessment and how it works

When you start your Cloud journey, we want to make sure that you enjoy a smooth transition with full transparency and no surprises along the way.

That's why we start the process with a **Cloud Migration Assessment**, giving you full insight into your current solution environment and helping you find the best way for you to make the move over to Cloud.

By performing the assessment, we provide you with a clear onboarding plan that includes an upfront fixed fee and clear timeframes for the whole migration project.

What is the Cloud Migration Assessment?

The Cloud Migration Assessment is a streamlined evaluation process through which we analyse your Business World system, and identify any customisations or integrations that you are running today.

Based on the assessment, we are able to build a migration proposal with recommendations on how to make the most of your solution, and advise you on the best way to move forward with your Cloud migration.

This process will not only help accelerate your migration over to the Cloud, so you can quickly benefit from the latest Unit4 innovations, but will also give you a clear overview of costs and how long it will take to get your Cloud solution up and running.

Through the Cloud Migration Assessment, we are able to:

- understand your business drivers, specific requirements and objectives
- find details of current usage in your system
- evaluate your readiness to move to Cloud and produce an assessment report with details
- build a migration proposal with next steps.

How does the Cloud Migration Assessment process work?

To set the initial scope, we start by reviewing your existing processes and understanding your main business drivers. We look at available contract information, but also reach out to you to discuss any specific requirements and unique objectives your organisation may have.

As a next step, we will ask you to run the *Unit4 assessment* tool to analyse your current solution and environment, which helps us look at the usage of your system in detail, including:

- number and types of interfaces
- number and types of customisations
- number of users in your system
- transactions and intensity
- most commonly used screen views; and more.

Based on this, we are able to evaluate your readiness to move to Cloud and produce an **assessment report** with conclusions, and deliver to you a **migration proposal** with recommendations.

And that's it! We are now ready to start your journey by signing a solution agreement, and preparing your organisation for onboarding.

An onboarding plan that works for you

Based on the assessment, we are able to map out your entire journey to the Cloud, and provide you with a clear **onboarding plan** that fits the specific needs of your organisation.

Order within 2 months of receiving a migration proposal and get your assessment fee refunded.

As part of that, you will get a fixed fee and clear timeframes for the entire migration process, including any required system updates. We won't charge you anything more than what is already included in your onboarding fee – no matter what we encounter along the way.

And, if you sign up to a solution agreement with us within two months of receiving a migration proposal, you get your entire assessment fee back!

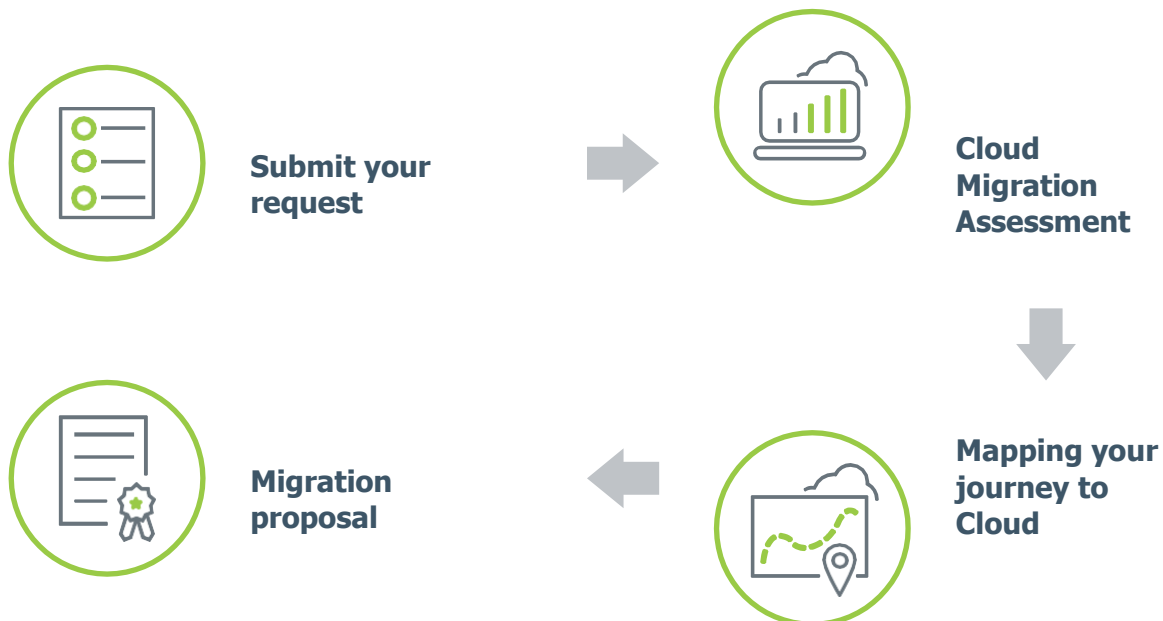

Figure 1: The Cloud Migration Assessment Process

Onboarding plan and timeframes based on your current version of Business World

Small

Business World v7.0 or higher
Up to 999 web users
Up to 40 desktop users
Database size <500 GB
Monthly transactions <1m
Microsoft SQL
No file document archive
Up to 3 customisations
Up to 4 interfaces

Live in 20 working days
Fixed onboarding price and assessment fee

Medium

Business World Milestone 5.0 or higher
Up to 4999 web users
Up to 99 desktop users
Database size <1TB
Monthly transactions <2m
Microsoft SQL
Document archive
<500GB
Up to 8 customisations
Up to 12 interfaces

Live in 40 working days
Fixed onboarding price* and assessment fee

Large

Any release of Business World
Up to 14999 web users
Up to 199 desktop users
